THE MICRO DOSAGE UNIT

It has been developed to be used at feed production works shops. It provides with a great easiness in preparing Premix. It automatically produces 16 kinds of raw materials in accordance with the desired instructions. It works under exact PLC control. The raw material is registered by the help of instructive information operator panel. It send all of the information about the production it does to SCADA and provides that the whole production is registered.

The number of silos is determined by the customers. Silo capacities and it's setting are projected according to customer needs

The whole equipment is produced from 304 quality stainless steel.
